

Smart Flow

What is the issue?

Bigger & longer houses have hot water outlets that are further apart

Standard solutions are inefficient, expensive & wasteful

Multiple water heaters

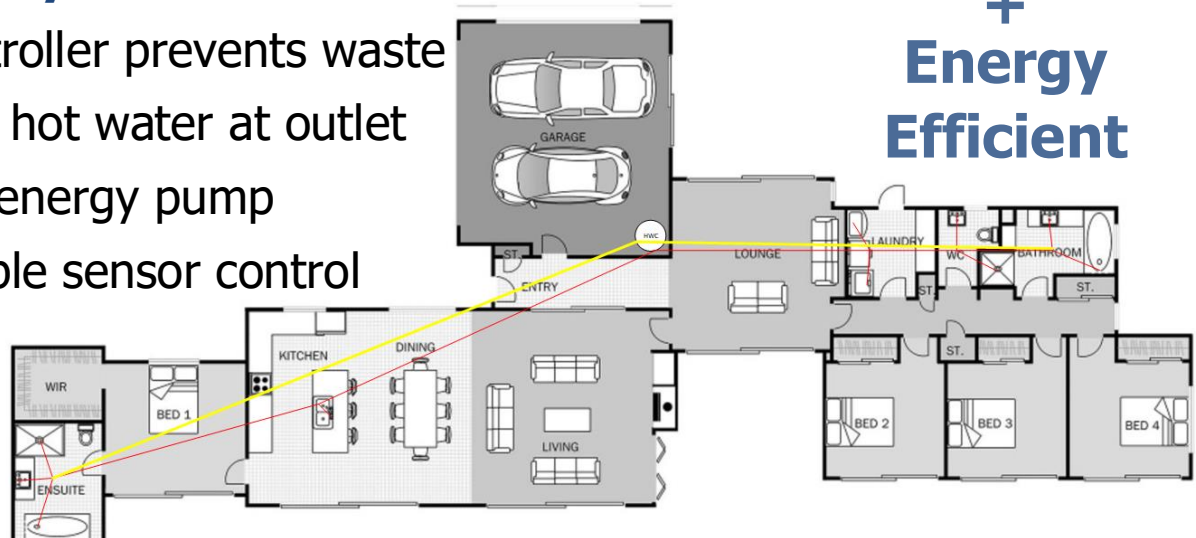

- High install cost
- Expensive to integrate renewable energy with multiple water heaters

Long pipe runs

- Long delays to use hot water
- Unnecessary water & energy use
- Complex plumbing design

Smart Flow system

- ✓ smart controller prevents waste
- ✓ immediate hot water at outlet
- ✓ super low energy pump
- ✓ customisable sensor control

Water + Energy Efficient

Smart Flow includes:

- Intelligent controls
- Grundfos ultra low energy pump (30 watts)
- Flow switch or PIR sensor control

Great value compared to multiple water heaters

Extremely low running cost

Easily installation in new build & existing homes

Savings

Sustainability

Independence
